Summary

Computer Science graduate (BRAC University, GPA 3.91/4.00) and Software Integration Engineer at SuperAnnotate, building backend services and AI/ML systems for a careers platform serving 200K+ users and for enterprise clients including NVIDIA, Amazon, and AWS.

Experience

Software Integration Engineer May 2025 – Present
SuperAnnotate *Dhaka, Bangladesh (Remote)*

- Build and maintain backend services for **sme.careers**, SuperAnnotate's careers platform serving **200K+ active users**; own deployment and DevOps across **AWS Lambda, Elastic Beanstalk, and DynamoDB**.
- Built an **AI interviewer** that has autonomously conducted **250K+ candidate interviews**, screening and scoring applicants at scale.
- Developed an automated **bounding-box annotation tool for NVIDIA** that cut annotation **average handling time (AHT) by 80%**.
- Designed a custom **RLHF environment for AWS** where reaching annotator consensus bypassed the QA step entirely, cutting **AHT by ∼50%** and improving cost-efficiency.
- Built an automated **CV-extraction pipeline** on the OpenAI Batch API, parsing **100K+ resumes** into structured JSON powering search, filtering, and matching.
- Integrated third-party platforms end-to-end: **Customer.io**, **Deel** (contract & KYC sync via an AWS API Gateway proxy), and **Mixpanel**; architected and built a **Python SDK** from scratch to power customer-support workflows.

Quality Assurance Associate – AI/ML Data Feb 2025 – May 2025
SuperAnnotate *Dhaka, Bangladesh*

- Contributed to large-scale **LLM training and evaluation** projects for **Amazon** and **NVIDIA**, producing high-quality datasets for frontier AI systems.
- Applied **prompt engineering** and LLM-output evaluation across NLP, vision, and multimodal tasks, strengthening data integrity and meeting client SLA accuracy targets.

Education

BRAC University Graduated Jan 2025
B.Sc. in Computer Science — GPA: 3.91/4.00, Highest Distinction *Dhaka, Bangladesh*

- **Relevant coursework:** Artificial Intelligence, Machine Learning, Neural Networks, NLP, Operating Systems, Computer Architecture, Database Systems, Compiler Design.

Technical Skills

Languages: Python, JavaScript, TypeScript, C, C++, SQL
Frameworks & Libraries: React.js, Node.js, Express.js, Django, Flask, PyTorch, TensorFlow, LangChain
Data & Cloud: PostgreSQL, MongoDB, Prisma, AWS (Lambda, EC2, API Gateway, Elastic Beanstalk, DynamoDB, VPC, CloudWatch)
AI/ML: LLM fine-tuning & evaluation, RLHF, prompt engineering, NLP, neural networks, OpenAI Batch API

Research

Generative Model for Continuous Sign Language Detection | *ViViT, Swin Transformer, BERT*

- Undergraduate thesis supervised by **Dr. Farig Sadeque** (Associate Professor, BRAC University; former Harvard Medical School research fellow). Built a novel pipeline for continuous sign-language detection and generation: ViViT, TimeSformer, and Swin Transformer for spatiotemporal features, with BERT as encoder/decoder for text translation.

Projects

AWS Cost Optimization & Auto Scaling | *AWS EC2, Lambda, VPC, EBS, CloudWatch*

- Built a serverless Lambda function to auto-delete unattached EBS volumes on EC2 termination, and deployed an end-to-end auto-scaling solution with a custom VPC and CloudWatch-driven policies.

Cyberbullying Text Detection | *Machine Learning, Python, scikit-learn, TensorFlow*

- Built and deployed an NLP model to detect cyberbullying in text, evaluating multiple classifiers and serving real-time detection as a web service.

Achievements

- **Vice Chancellor's Award, BRAC University** — highest distinction in undergraduate studies.
- **HSBC International Case Competition** — Semifinalist (global business problem-solving competition).
- **Daily Star & Daily Sun Awards** — among the highest achievers in O-levels and A-levels.
